

The industry leader in nut cracking!

Pecan Cracker 238C

Cracker 238C

Savage crackers have revolutionized the pecan-shelling industry over the past couple of decades. In North and South America, Australia and South Africa, Savage's superb crackers are helping shellers, large and small, speed through tons of nuts and improve their bottom line.

The Savage 238C Cracker is an engineering marvel derived from the tried-and-true Savage 238S. It can handle an amazing 400 nuts per minute, and produce a higher quality end-product with more complete halves! Learn more about these crackers on the Savage website.

Savage 238C Cracker

Savage Crackers revolutionize nut-shelling operations!

Savage Equipment's 238S cracker revolutionized nut-cracking operations around the world, and the 238C is even better. Like the original, the 238C's precision air-powered system "snugs up" tight against almost any sized pecan, resulting in more consistent cracking and a very high percentage of complete nut-halves. Although it looks much the same on the outside and fits in the exact same footprint, the 238C is a whole new machine on the inside. The all-new turret of the 238C incorporates the functions of the hoses and air cylinders of the 238S. It requires less maintenance and is easier to work on. It also does a better job of cracking at the high end of its speed range compared to the 238S.

Savage 238 Crackers are the heartbeat of Savage Silverline nut-shelling systems around the world. Savage Equipment, can put together a complete shelling plant, including crackers, shellers, sizers, elevators, inspection tables and packaging stations. Contact the Savage shelling experts to design the ideal system to meet your needs.

238C Cracker Features:

- Simple operator controls
- Small size footprint
- Constructed with durable, food-friendly stainless steel
- High performance with almost any nut size
- Unique valve system provides even wear and fewer parts changes
- Cleaner operation with less dust and less nut pieces
- Designed to require less maintenance.
