

The windrow leaf vacuum!

Savage Row-Vac

Model 8960

Savage Equipment is proud of the tremendous feedback we have received on our 8960 Row-Vac. From the frame to the fan, it's built extra-rugged for reliability and long life. We tested it, tweaked it and then tested and tweaked some more. Now pecan growers are telling us how great it is at saving them time and money.

The Savage Row-Vac clears away the bulk of the leaves and sticks from your windrow. This reduces wear on your harvester and greatly

increases the speed your harvester can travel over the ground, helping get the job done sooner. Teamed up with the Savage V-Sweeper, the Row-Vac will do even more to improve your efficiency at harvest time. You can check out our Savage machines in action on our website and on our YouTube channel: youtube.com/savageequipmentinc.

Savage Row-Vac

*The Savage Row-Vac accelerates
your nut harvest!*

It's time to accelerate your nut harvest, and the Savage Row-Vac is designed to do just that. Mature pecan trees tend to drop masses of leaves and sticks along with those precious pecans. This debris can choke almost any row harvester and really slow down your harvest operations. The solution is Savage's sturdy Row-Vac. Its powerful, rugged fan will eliminate the vast majority of leaves, sticks and debris, leaving behind an easily harvested row of pecans and small sticks. You will be able to harvest faster as the Row-Vac reduces your workload and labor costs.

Row-Vac Features:

- Simple and quick tractor mounting
- Easy to maneuver and tow
- Speedy hydraulic height adjustment
- Rugged fan is finely balanced and has replaceable blades.
- Debris exhaust is diverted downward and aft to minimize airborne dust.
- Can be built for tractors with either 540 or 1000 RPM power take-off.

Everywhere you look, you will find materials and craftsmanship that demonstrate our dedication to quality and dependability.

Model	PTO RPM	Length/Width/Ht.	Intake width	Min. HP
