

*Industry leader in pecan processing*

# **Savage Silverline**

**Typical Small-Scale  
Pecan Shelling Plant**

Innovative designers and skilled craftsmen at Savage Equipment have invested decades in developing a line of machines that are revolutionizing the nut-processing industry. We call it our Silverline, and it has gradually become the standard for performance, ease-of-use and durability in the pecan processing community.

The Savage Silverline includes everything you need to assemble a world-class nut processing operation of almost any size. You can see these amazing crackers, shellers, elevators, processing tables and meat sizers at work on our [savage-equipment.com](http://savage-equipment.com) website or YouTube channel, [youtube.com/savageequipmentinc](https://www.youtube.com/savageequipmentinc).

# Savage Silverline

## **Savage Silverline sets the industry standard for nut processing!**

Savage Crackers come in two sizes, both of which will put old-fashioned mechanical crackers to shame. The 252S (shown) will crack pecans at 750 nuts per minute, while the 238C (opposite page) cracks nuts at 400 per minute.

The Savage Vibratory Conveyor 815S can be very useful in a variety of applications. When you need to move clean product quickly, the 815S Conveyor is the food-friendly, stainless-steel solution. These machines can be used as single units or in an almost unlimited series end-to-end.

The Savage Meat Sizer (model 148S) is the newest addition to the Silverline family. It is built for industrial-speed sizing. The stacked sizing screens can be swapped out quickly. You can sort two, three, four or more sizes and the discharge chutes can be oriented in almost any direction. Shown with 704S Elevator.

The Savage Meat Sizer (model 150S) is our smaller-scale meat sizer. It does a great deal of work in a very small footprint (47" high x 63" long x 21" deep). This machine conveys shelled nut-meats across a series of four vibrating screens of increasing size. Screens can be customized to your needs. An optional large-capacity receiving hopper can be integrated.

### Savage Silverline Features:

- Simple operator controls
- Constructed with durable, food-friendly stainless steel
- Precision machined and expertly welded to provide long life and high performance

Savage offers Shellers in three sizes, with capacities of approximately 800, 1400 or 2100 pounds per hour. After the nuts are cracked, these rugged machines extract the nut-meats from their cracked shells.

The Savage Inspection Table (model 520S) allows for visual inspection of the shelled nuts as they transit the vibrating table. Operators can quickly remove unwanted shells and nuts into conveniently located chutes on one or both sides of the table. The table with hopper measures 59" high x 108" long x 37" deep.

The Savage 522S Packaging/Inspection Table is often the final station of a nut processing plant. A single operator is able to visually inspect shelled nuts, and weigh them as they fall into a box or bag. The operator can also control the rate of flow from the large hopper. This station measures 65" high x 38" wide x 40" deep and is shown with the 704S 8-foot Bucket Elevator.
